PSI-4-SF Percentile Profile

PSI-4-SF T-Score Profile

PSI-4-SF Score Summary

Defensive Responding Score = 20.

The Defensive Responding score is clinically significant when the raw score is 10 or lower.

Scale	Raw score	Percentile ^a	T score
Total Stress	95	74	57
Parental Distress (PD)	32	71	55
Parent-Child Dysfunctional Interaction (P-CDI)	29	76	56
Difficult Child (DC)	34	76	57

^a 16th – 84th Percentile = Normal range

85th – 89th Percentile = High range

90th Percentile or higher = Clinically significant range

Interpretation of Protocol

Defensive Responding

This appears to be a valid protocol.

Total Score

The overall level of stress the parent is experiencing falls within the normal range.

Parental Distress

This parent appears to be experiencing a normal degree of parenting distress as a function of her personal characteristics. The parent's personal adjustment to parenting does not appear to be a source of stress. Follow-up evaluation should be conducted regarding problems in this parent's relationship with her child's other parent.

**Parent-Child
Dysfunctional
Interaction**

The reported quality of the parent-child interactions for the most part falls within normal limits. The child largely meets the parent's expectations and the parent-child relationship is reported to be stable.

Difficult Child

This parent's perception of her child's behavioral characteristics suggests that her child's functioning is, for the most part, normal. Deviations from normal functioning are not perceived as excessively disruptive or destructive to the parent-child relationship.

PSI-4-SF Item Responses

Item	Response	Item	Response
1	D	19	D
2	A	20	SD
3	A	21	A
4	A	22	3
5	A	23	D
